

High quality systems management and IT Operations management software for UNIX, Linux and Microsoft Windows

cosbatch version 3.1 – web browser interface

Batch job scheduling software for UNIX, Linux and Microsoft Windows

cosbatch is most often deployed over enterprise networks incorporating several Unix, Linux and Microsoft Windows servers. It follows that users may value the option to control and administer cosbatch modules by means of what is now the default user access method for networked users – the web browser. In addition to offering the advantage of a widespread standard, a user interface delivered via a web browser also permits cosbatch to be accessed without regard to distance.

The web browser based user interface supports a defined selection of cosbatch functions. It allows users to submit batch jobs, to monitor and manage batch jobs and queues, and to monitor and manage job suites. It does NOT replicate the full functionality of the GUI.

- Online submission of batch jobs
- Access security controls
- Queue monitoring
- Job monitoring
- Suite monitoring
- Release jobs for processing
- Force jobs to run
- Hold jobs before processing
- Pause jobs
- Delete jobs
- Display job attributes
- Change job attributes

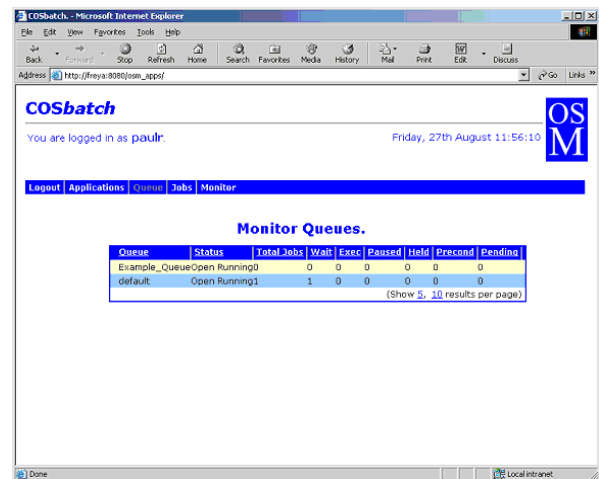

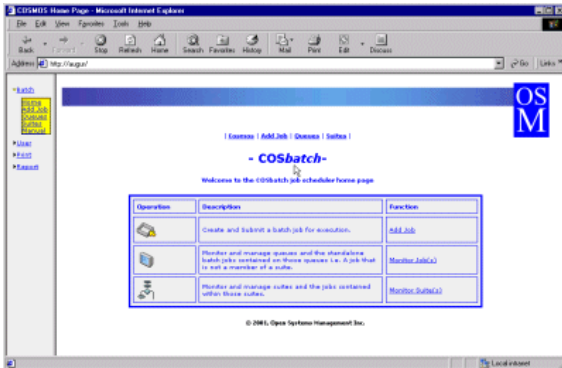

Figure shows an example screen shot from the cosbatch V3.1 web browser interface

- Compatible with all modern web browsers

Requirements:

Client - Web browser (Internet Explorer V6 or later, Firefox V2 or later, Opera V9 or later, Safari V3 or later)

Web Application Server – Apache Tomcat V5.5.17 or later, Glassfish V or later
